Camarillo Airport ALP Update

April 2023

- ✓ Joint Powers Agreement (JPA) upheld
- ✓ No changes to Camarillo Airport's current role
- ✓ No plan for large air cargo activity
- ✓ No plan for additional runway length
- ✓ No plan for scheduled commercial service

What is an Airport Layout Plan?

An Airport Layout Plan (ALP) is a document that depicts the existing and planned facilities on an airport. FAA requires a current ALP in file to support grant funding decisions. Any project for which the Airport is seeking federal funding must be depicted on the ALP.

How is this done?

The FAA assists airports to meet this requirement through the funding of planning studies like master plans. In contrast to a full master plan, an ALP update satisfies FAA requirements without needing to consider changes to Camarillo Airport's role.

What is being studied?

The ALP Update will focus on identifying and prioritizing projects that will sustain Camarillo Airport's critical facilities, especially the runway and taxiways. It is essential that we receive funding from the FAA and take steps to remain eligible for grant funding.

Additionally, the study will focus on meeting or documenting compliance with evolving FAA safety standards, and identifying the best uses of airport property, both aviation-related and in the adjoining business park.

How is the community involved?

The Department of Airports is committed to working closely with our surrounding community members on airport issues that affect them. To that end, we are hosting a series of workshops to allow the community to share their experiences and learn more about the airport. Meetings and study materials will also be available in Spanish.
